Case 10596933: Create a link in the job performance form to learning agility form

Priscila Faustino

Hello

I use two different forms to evaluate learning agility and job performance. I wonder if is possible to create a link that enables entering the next form without leaving the first one. For example, the manager will evaluate the employee and have to fill two forms, instead, the manager fill the first and in the end of the form will have a link to redirect to next form.

Best Regards

Priscila Faustino

Agente

Hi Priscila,

Thank you for updating the case.

My apologies for the late update since I had my sick leave yesterday. Regarding your concern about the link in the bottom of the form to be able to open the next form without leaving it, unfortunately we have no tool to create a link in the form. I tried to conduct some research about it and ask one of our internal support team about this however I ended up all with the same result.

As much as I would like to help you, but what the system can only do is to click the option send the form to the next step, and by the time you click that button there will be an option for you to open the next form. If you have more concerns or clarifications please feel free to update the ticket and I'll be more than happy to assist you!

Best Regards,
